# TECHNOLOGIES & INNOVATIONS

Our technologies are born of a simple premise: to Outwork Them All in every weather condition and challenge your crews face. For comfort in extreme heat to the bitter cold, for the mobility your people need to perform at their best, Carhartt has delivered as only a veteran of the industry for over 130 years can.

STAIN BREAKER

## STAIN BREAKER®

Fight dirty with Carhartt Stain Breaker® stain release. These hardworking fibers help send job site stains straight down the drain. Stain Breaker® technology releases stains.

RAIN DEFENDER

## RAIN DEFENDER®

Rain Defender® durable water repellent technology has your back all day, every day by forcing rain to bead up and roll right off. It makes our gear rain, mist and snow resistant. Available in FR styles.

FULL SWING

## FULL SWING®

Hardworking crews told us they wanted gear with more stretch and recovery – and we listened. The result was our revolutionary Full Swing® technology: a series of hardworking jackets built to give you greater range of motion.

WIND FIGHTER

## WIND FIGHTER®

The wind can whistle, you won't care. You're better protected than a franchise quarterback in a pre-season game. Wind Fighter® technology tames the wind.

STORM DEFENDER

## STORM DEFENDER®

Storm Defender® waterproof breathable technology is engineered to be dependably durable, waterproof, and breathable – so wet can't get in, but sweat can get out.

FORCE

## CARHARTT FORCE®

Force isn't a fabric, it's a collection of hard-working attributes that benefit you in a number of ways. All Force products are sweat-wicking with FastDry® technology. But also must possess at least one of the following attributes: 1) Odor-fighting capability 2) Stain Breaker® technology that releases stains while also helping the garment maintain its appearance over a longer period of time. Workers don't just like Force, they love it because it works harder day in and day out for a reasonable price. If it says Force, it will Outwork Them All.

QUICK DUCK

## QUICK DUCK®

Carhartt Quick Duck® outerwear: repels the rain, resists the wind. Anything else up your sleeve, Mother Nature?

RUGGED FLEX

## RUGGED FLEX®

Looks traditional, feels exceptional by delivering stretch for freedom of movement and toughness without bulk.

# MEN'S KNITS

Keeps workers cool,  
keeps working hard  
with proven Carhartt  
durability built-in

# THE HOTTER IT GETS, THE HARDER THIS GEAR WORKS

Leading the fight against heat with  
max Force

Keep workers dry and comfortable through the hottest conditions with Force. Our proprietary design combines odor-fighting properties, FastDry® to wick sweat and Stain Breaker® to stay looking sharper, longer. Force is the on-site advantage that outworks the heat and every other crew not wearing our patch.

# BACK YOUR TEAM WITH OUR PROVEN RAIN-FIGHTING TECHNOLOGY

Rain Defender® durable water repellent (DWR) sheds wind, cold, and light rain to give your crew the protection they need to meet wet workdays head on.

Storm Defender® waterproof breathable technology keeps water from getting in but allows sweat and condensation to get out. It's built to conquer the heaviest downpours, and the toughest jobs in the forecast.

**Storm Defender® Loose Fit Heavyweight Jacket**

Model No.	OJ4670-M	SAP No.	104670
-----------	----------	---------	--------

**FABRIC**

- 8.1 oz, 100% nylon shell

**FEATURES**

- Storm Defender® waterproof, breathable technology stops water from getting in but lets sweat get out
- 10K/10K waterproof breathability rating
- Wind Fighter® technology tames the wind
- Fully-taped waterproof seams
- Polyester mesh-lining in body for breathability
- Taffeta sleeve and hood lining for easy on/off
- Two-way, full-zip front with inner and outer storm flaps to keep water out
- Left chest pocket with secure waterproof zipper and storm flap to keep water out
- Two secure zippered lower pockets with storm flaps
- Hook-and-loop cuffs with inner storm cuffs for added protection
- Adjustable, removable roll-away hood
- Two inner hook-and-loop pockets
- Adjustable, drop-tail hem for added protection
- Replaces J162

# WORKWEAR GOES HAND IN HAND WITH EMPLOYEE SATISFACTION AND RETENTION.

Everyone does a better job wearing gear that fits right, has plenty of room, and is built for the conditions and the job at hand.

Employees are grateful and more committed to the employer who provides that gear. For centuries, military leaders have known that smart, functional dress translates to esprit de corps. And the same applies to work crews.

Each day crew members dress for work, they're reminded the company values them enough to provide high-quality gear. That pride inevitably shows in the quality of their work. It instills a sense of pride, so they're willing to work harder and smarter, and they're far less likely to leave the company.

Experience across a wide range of industries indicates a direct correlation between the quality of employee workwear and employee retention over time. Until such a study is conducted, savvy employers are putting their money where it can do the most good for their bottom line — squarely on the backs of their workers.

Tellepsen, Pasadena, Texas

# THE LIGHTEST, MOST BREATHABLE FR SHIRT WE'VE EVER BUILT

Outfit workers in Carhartt's coolest, most comfortable FR shirt, get a harder-working crew in turn.

Our 4.7 oz FR Force Lightweight Long Sleeve Shirt is extremely lightweight, with moisture-wicking and quick-drying properties that handle the hottest conditions with ease. Wrinkle resistance and extra colorfast properties make it a long-lasting favorite. Ounce for ounce, it's every bit as tough as our heavier weight Force fabrics, with FR protection that's guaranteed for the life of the shirt.

**Flame-Resistant Force Loose Fit  
Lightweight Long-Sleeve Shirt**

**Model No.** TW4138-FRM    **SAP No.** 104138

**FABRIC**  
4.7-ounce, 50% viscose / 33% meta-aramid / 10% nylon / 5% para-aramid / 2% antistat

## CARHARTT FOOTWEAR

For anyone who demands top-notch, all-day comfort, support, and protection in a pair of boots that truly outwork them all. Like everything we build, Carhartt footwear is fortified with the long-lasting, rugged durability that hardworking feet depend on. Plus every boot we build comes battle-tested and ready to be put through the roughest conditions you've got. Offering a wide range of styles and materials to meet your workers' needs, Carhartt boots are available with safety features including ASTM F2413-18 certified safety toe (I75/C75), electrical hazard (EH), static dissipative (SD), metatarsal (MT), and puncture resistance (PR). ASTM F2892-18 certified soft toe boot are also available for electrical hazard (EH) and static dissipative (SD). In addition, some styles offer heel guards to provide ankle stability and side impact coverage. Wherever the jobsite — whatever it takes — our high performance, protective boots have you covered.

## CARHARTT WORK BAGS, PACKS & GEAR

Built on the mission to serve and protect hardworking people, Carhartt and Signature Products Group have worked as one to forge packs, bags, and other gear-haulers that work as hard as you do. On the same crew since 2018, Carhartt and SPG create rugged, durable products beyond just head-to-toe solutions, across multiple accessory categories. Gear that's constructed using the toughest, highest-quality fabric, fortified with triple-needle stitching, and engineered with water-repellent Carhartt Rain Defender® technology for a product that's fit for the next frontier of work.

compliance. Carhartt is  
here for you, 24/7.

# PROPER CARE AND USE OF CARHARTT FR

## PROPER CARE

Follow the *manufacturer care instructions* located on the inside tag of each FR garment, and these guidelines when home laundering your Carhartt FR:

- Wash garment with normal laundry detergent separately from non-FR garments in cold-warm water
- **DO NOT** use bleach (or detergents containing bleach/hydrogen peroxide)
- **DO NOT** use stain remover
- **DO NOT** use starch
- **DO NOT** use fabric softener/dryer sheets

## PROPER USE

Follow *your company's* safety requirements to determine the standards and calorie rating your garment must meet when working in hazardous areas.

- Carhartt recommends flame-resistant clothing be worn as base layers under FR garments
- Garments should have a reasonable fit with no modifications that will reduce effectiveness
- Prevent additional exposure to skin (keep garments buttoned and sleeves rolled down)
- Keep shirts tucked in when in a hazardous area
- Do not apply DEET to FR clothing — **DEET IS FLAMMABLE**

## USEFUL LIFE & REPAIRS

Regularly inspect your FR garments. Replace garments once they are past their useful life:

- Torn/ripped fabric
- Open seams/holes
- Fabric is frayed or threadbare
- Garment has been bleached
- Garment is soiled with flammable substances

Carhartt FR clothing can be repaired. The FR fabrics and FR specific threads used for repairs should be equivalent in performance and FR characteristics to those used in the original construction of the garment.

**Carhartt FR is guaranteed flame-resistant for the useful life of the garment, provided manufacturer care instructions are followed.**

## carhartt **FR**

### 1 Who is Carhartt Flame-Resistant (FR) clothing designed for?

Carhartt FR clothing is designed for electricians and workers in the utility, oil, gas, and petrochemical fields who are at risk of exposure to electric arc flashes and flash fires, which could cause severe or fatal burn injuries. Typical candidates for FR clothing include electric lineworkers, pipeline and refinery workers, as well as industrial electricians.

### 2 How does Carhartt FR clothing help protect against burn injury?

Through the use of flame-resistant chemicals or fabric blends, Carhartt FR clothing is designed to self-extinguish within seconds after the source of ignition is removed, limiting the degree of burn and body burn percentage. It is not designed to be flameproof; it is flame-resistant.

### 3 Can the flame-resistant chemicals be washed out?

No. Carhartt FR clothing is guaranteed to be flame-resistant for the useful life of the garment regardless of the number of launderings, provided garment-care instructions are followed.

### 4 How can Carhartt FR clothing be distinguished from traditional Carhartt clothing?

Carhartt FR clothing is clearly identified with a “FR Carhartt” patch in place of the traditional Carhartt patch. Product hang tags and CAT labels also help distinguish Carhartt flame-resistant products.

### 5 What is an ATPV?

An Arc Thermal Performance Value (ATPV) is a rating assigned to flame-resistant clothing indicating the level of electrical arc flash protection provided. Higher-weight (e.g., thicker, denser) fabrics typically have higher ATPVs and provide increased protection (as does the layering of FR clothing). All Carhartt FR clothing has the ATPV marked on the inside label for easy reference.

### 6 What is EBT?

Like ATPV, Breakopen Threshold Energy (EBT) is a rating assigned to FR clothing indicating the level of protection provided. EBT is used when ATPV cannot be measured due to flame-resistant fabric breakopen. EBT is also measured in calories per centimeter squared (cal/cm<sup>2</sup>).

### 7 Can Carhartt FR clothing be repaired?

Yes, Carhartt FR clothing can be repaired, but repairs must be made with fabrics and sewing threads that have at least the same FR characteristics as the original garment.

### 8 Is flame-resistant thread required for embroidery applications?

None of the current regulations governing the use of flame-resistant clothing specifically requires the use of flame-resistant thread for embroidery applications. However, Carhartt recommends using flame-resistant thread for embroidery or emblem attachment.

### 9 Can I use DEET on flame-resistant clothing?

No. DEET is one of the most effective mosquito repellents on the market, but it should only be used on the skin, never on FR clothing. For the most effective mosquito and tick protection, use DEET-based repellents on the skin (especially on exposed skin) and use a permethrin (the active ingredient in most lice shampoos) product washed into or applied to flame-resistant clothing. These products do not add any appreciable flammability to FR clothing and therefore do not affect its flame-resistant properties. When using permethrin in a spray form, use the **WATER-BASED** formulas only. Propellants are almost always flammable in this application, so the powder form washed into the clothing or the **WATER-BASED** spray formula is recommended.

## WHAT IS A PPE CATEGORY?

A PPE category is a rating for FR clothing based on the arc protection rating that indicates the level of protection the garment provides. There are four PPE categories ranging from 1 to 4, with a PPE category of 1 representing the least protection, and a PPE category of 4 representing the most protection. The NFPA 70E consensus standard assigns these categories based on the electrical maintenance tasks to be performed, and each PPE category relates to a specific range of arc protection. For example, PPE category 2 would include arc ratings greater or equal to 8 cal/cm<sup>2</sup>, but less than 25 cal/cm<sup>2</sup>.

<p><b>PPE CATEGORY (CAT)</b></p> <p><b>1:</b></p> <p><b>4 CAL/CM<sup>2</sup> MINIMUM</b></p>	<p><b>PPE CATEGORY (CAT)</b></p> <p><b>2:</b></p> <p><b>8 CAL/CM<sup>2</sup> MINIMUM</b></p>
<p><b>PPE CATEGORY (CAT)</b></p> <p><b>3:</b></p> <p><b>25 CAL/CM<sup>2</sup> MINIMUM</b></p>	<p><b>PPE CATEGORY (CAT)</b></p> <p><b>4:</b></p> <p><b>40 CAL/CM<sup>2</sup> MINIMUM</b></p>

Layered testing is the only way to determine the total arc rating for layered FR garments. Carhartt has conducted layered testing for a variety of combinations, using some of our most popular FR clothing styles. The resulting layered arc rating of the various combinations is listed in the table below for your reference.

Carhartt FR Fabric Outer Layer	Style Reference #	Outer Layer Solo ARC Rating	Carhartt FR Fabric Inner Layer	Style Reference #	Inner Layer Solo ARC Rating	Combined Layered ARC Rating

Testing conducted for Carhartt, Inc. by Kinectrics High Current Laboratory, Toronto, Ontario, Canada.

## OSHA General Duty Clause

- Employers are required to provide their employees with a place of employment that is free from recognizable hazards that are causing or likely to cause death or serious harm to employees.

## OSHA 1910.269

- Federal regulation that defines the safety practices of employees working in the generation, transmission and distribution of electricity.
- Prohibits clothing that, when exposed to flames or arcs, could increase the extent of wearer injury. Employers must determine appropriate clothing based on an evaluation of potential hazards in the work environment. Clothing made from flame-resistant materials is acceptable under the rule; i.e., clothing that meets the requirements of ASTM F1506.
- The employer shall ensure that each employee exposed to potential hazards from electric arcs wears protective clothing and other protective equipment with an arc rating greater than or equal to the heat energy estimate whenever that estimate exceeds the heat energy of 2.0 cal/cm.2
- The 2014 revision to the regulation requires that as of April 1, 2015, employers must provide protective equipment sufficient to cover the employee's entire body.
- Acceptable FR clothing shall conform to the requirements of ASTM F-1506, and must have an appropriate arc rating (Arc Thermal Performance Value [ATPV], or Breakopen Threshold Energy [EBT]). The arc rated clothing must be rated at or above the potential hazard from an arc flash exposure.

## National Electric Safety Code

- National Electrical Safety Code (NESC) sets rules for safeguarding personnel during installation, operation, or maintenance of electric supply and communication lines and associated equipment.
- States that employers must conduct a hazard analysis to determine the potential arc exposure for employees working on or near energized equipment. Arc rated clothing required if exposure is greater than 2 cal/cm.2

## Standard on the fundamentals of combustible dust

- NFPA 652 standard provides the general requirements for managing combustible dust fire and explosion hazards. It states that when FR clothing is required, it must comply with the requirements of NFPA 2112 and be selected, procured, inspected, worn, and maintained in accordance with NFPA 2113.

## Standard for electrical safety in the workplace

- The NFPA 70E standard addresses electrical hazards in the workplace and supplements the NESC by focusing on protecting the worker from electrical hazards. The objective of this standard is to provide protection to workers based on the potential electrical exposure energy to which they could be exposed. NFPA 70E mandates that employers conduct a hazard risk assessment to determine the potential arc exposure for employees who work on or near energized parts or equipment.
- NFPA 70E requires that employees wear proper arc-rated flame-resistant (FR) clothing whenever there is a possible exposure to an electric arc flash event sufficient to cause a second degree burn. Such FR protective clothing must be rated for protection from electric arcs so they can be properly matched to the appropriate hazard levels. This arc rating, either ATPV or EBT, appears on the labeling of our protective apparel for easy referencing. Matching the arc rating of the flame-resistant apparel with the hazard rating helps improve worker protection against the chance of serious burn injury or death

## Standard on flame-resistant clothing for protection of industrial personnel against short-duration thermal exposures from fire

- NFPA 2112 standard provides minimum requirements for the design, construction, evaluation, and certification of flame-resistant (FR) clothing for use by industrial personnel exposed to potential flash fire situations. It does not attempt to provide any guidance on matching the PPE to the quantified hazards – that is what NFPA 2113 is designed for.

## Standard on selection, care, use, and maintenance of flame-resistant garments for protection of industrial personnel against short-duration thermal exposures from fire

- Provides minimum requirements for the selection, care, use, and maintenance of flame-resistant garments compliant with NFPA 2112 for use in potential flash fire situations. This standard reduces the potential risks caused by incorrect maintenance, contamination, or damage to FR clothing.

## American National Standard for high-visibility safety apparel and accessories

- ANSI/ISEA 107 provides performance requirements for conspicuous materials to be used in high-visibility safety apparel (HVSA) and specifies minimum amounts of background, retroreflective, and combined-performance materials. The 2020 edition continues to present three performance classes of garments based on the amount of visible materials and design attributes incorporated into the final garment configuration. The standard now identifies garment types based on expected use settings and work activities being performed. These are designated as off-road (type O), roadway and temporary traffic control (type R), or public safety activities (type P).

Some styles come in sizes that don't work with the majority of customers. So when one or more of these non-stock sizes is needed, they require longer lead times (typically 8-10 weeks), freight charges, order increments (by style multiples of minimum order number), and an "ALL ORDERS FINAL" return policy (no returns outside manufacturer defect). For more information on placing a custom order, call Customer Service at **800-786-3916**. Orders can be placed by email at **CYC@carhartt.com** or by faxing them to **800-217-2895**.

## HOW TO INTERPRET NEW MODEL NUMBERS

Model numbers will be based on the following categories and sub-categories. The category is the first letter of the model number, the sub-category is the second letter of the model number.

e.g., Sweatshirt = **T** (Tops) + **S** (Sweatshirts): **TS**

Non-Denim Bottoms = **B** (Bottoms) + **N** (Non-Denim): **BN**

The four-digit number following the letters will, most likely be tied to the last four digits of the SAP number. The last element of the style number is the gender of the clothing (-M or -W). If the style is unisex (like the A18), there will be no gender letter included.

**Example: 102291**  
**Current:** 102291 Rugged Flex® Rigby Dungaree  
**New:** BN2291-M Rugged Flex® Relaxed Fit Canvas Work Pant

\*unless unisex

CATEGORY	SUB-CATEGORY
A – ACCESSORIES	H – HEADWEAR
	M – MISC
	B – BASELAYER
B – BOTTOMS	D – DENIM
	N – NON-DENIM
	S – SHORTS
T – TOPS	K – KNITS
	S – SWEATS
	W – WOSENS
	J – SHIRT JAC
O – OUTERWEAR	R – SWEATER
	R – BIBS
	J – JACKETS
	C – COATS
	V – VEST
	B – PANT
	X – COVERALL
	H – HOOD

### NEW NAMING DIFFERENCE: LINKED STYLES

When there are Women's styles that have been intentionally designed to align with Men's, those styles will share similar Style Names and Model Numbers, making it easier for internal teams, retailers and consumers to identify Women's styles that are designed to align with Men's.

We have updated our sizing charts to more accurately reflect the body standards we build our product to fit, removing ambiguous ranges. The body standards we build product for have not changed, nor has the product. The information update will help to better navigate the Carhartt sizing systems and products. The additional body measurements given will set expectations for all consumers on how the bodies we designed the product for might vary from their own, including those wanting or needing to purchase across gender.

\*MEASUREMENTS IN INCHES

## HOW TO MEASURE

**Chest:** Measure just under arms and across shoulder blades holding the tape firm and level. If your chest falls between sizes, order the next size up.

**Arm Length:** Measure from the center back base of the neck, over the shoulder and down the arm to the wrist bone.

**Natural Waist:** Bend side to side and find the natural bend in your body; this is your natural waist. **Note:** It may not be the smallest point.

**Hip/Seat:** Measure the fullest point between your natural waist and crotch.

**Thigh:** Measure around one thigh at the widest point.

**Inseam:** Measure from where the leg meets the body, to the bottom of the ankle bone.

For best results, measure over your undergarments.

## HEIGHT CHART
